REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

As for claims 1, 9, 21 and 37, though Zerbe et al. (US Patent 6,950,956 B2), hereinafter Zerbe teaches an integrated circuit with timing adjustment mechanism and method which includes using a register to store a value that represents a timing offset to adjust the time at which the data is sampled (see abstract). Despite these teachings, he fails to specifically teach an interface controller coupled to the claimed pattern comparator and to the claimed phase adjustment logic, which is operable in an initialization mode to cause the phase adjustment logic to sequentially output a plurality of phase adjust signals, which cause the receive clock generator to incrementally alter the phase of the receive clock signal. Additionally he fails to teach the receive interface controller as determining (based on the results signal from the pattern comparator), the phases of the receive clock signal that are able to capture received data patterns that match the expected data pattern stored in the expected pattern memory as claimed by Applicant.

As for claim 53, Zerbe fails to teach capturing data by first attempting to capture the data responsive to transitions of a receive clock signal, and further incrementally altering the phase to determine that the received patterns match the expected data pattern as recited in by Applicant.

Claims 2-8, 10-20, 22-36 and 38-52 are allowable for depending on claims 1, 9, 21 and 37 respectively.

Art Unit: 2188

Claims 54-57 are allowable for further limiting claim 53.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
